

COATED VS UNCOATED WORKSTRING

FRAC PLUG MILLOUT IN MARCELLUS SHALE ON 2-7/8" PH-6 P-110 7.9# TUBING

TK-34XT COATED TUBING

Wellsite Fishing and Rental Services, LLC is pleased to offer TK-34XT coated workstring for use in various downhole applications. As opposed to uncoated tubing, TX-34XT requires no friction reducer gel, aids operators in maintaining steady and manageable circulating pressure, and eliminates the presence of scale development. Coupled with this, WFRS's tubing also results in lower pump pressures, ensuring all fluid velocity requirements are met.

Seneca Resources said they were "completely surprised by the outcome and very pleased with the product." Stat Oil, likewise, said WFRS's coated tubing was "unbelievable, [we saw an] immediate pressure drop" with this product.

Wellsite Fishing & Rental Services was founded in 2013 and is led by a seasoned team of oilfield service executives with proven track records of delivering value to customers and a commitment to health, safety and quality standards. The goal of WFRS is to provide customers the highest quality services in the oil and gas industry.
